## PAPER MINIS

# INSTRUCTIONS

BY ASHTON SPERRY

# Paizo Paper Minis Instructions

## You Will Need:

- A printer
- Cardstock
- Scissors or a craft knife
- A ruler or straight-edge
- Spray-on or craft glue

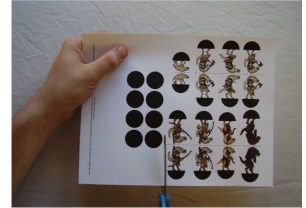

Print out the minis on cardstock; set your printer to high-quality printing if possible. Once the minis are printed out, cut the circle bases off of the rest of the page and set aside.

Using a ruler or straight-edge and a craft knife or pair of scissors, score the red lines between the two sides of the minis (do NOT cut all the way through; the score-line is to help make the fold more even). Then, score the space where the minis' feet meet the base on the back side (if you are having a hard time seeing where the line is, place the sheet on a window; the light should make the printed side of the cardstock more readily visible).

Glue the two halves of the mini together; make sure not to glue the two halves of the base together. Let the glue dry as per the glue's instructions; meanwhile, begin cutting out the circle bases.

Once the glue is dry, apply glue to the two halves of the mini, then attach to the white side of the circle base. Press and hold firmly for a minute or so; then follow your glue's instructions as above. Repeat with all the miniatures.

If you have a black marker, you can use it to color the sides and crevices of the base black to match the rest of the base.

Congratulations! You now have a complete set of miniatures for use in your game!
